### Short description

The P200 is an open-frame power supply unit with an additional cover. The primary-secondary conversion occurs in rugged half-bridge-technology. Besides the controlled main output up to four secondary voltages are possible. The total power of 200 W is increaseable to 280 W for 10 s. Due to the design of the circuit as voltage- and current source and the optional features, the device is suitable for a variety of applications.

### Variation

max. 200 W, 250 W with fan  
max. 40 A, secondary output 10 A  
max. 150 V

### Options

The power supply unit can be provided with an automatic input voltage detection AVS 115/230 V<sub>AC</sub>) or with a power factor correction circuit (PFC) to meet the standard EN 61000 part 3-2. DC-supply with 110/220 V<sub>DC</sub> is possible when using PFC. The power supply may be switched off by remote On/Off-input. Power-fail or DC-fail can be provided as relay contact. Alternatively, VME-bus-signals can be generated. The output voltage is controllable by an analogue signal. The convection cooling can be assisted by a temperature controlled fan.
